World renowned and market leading...

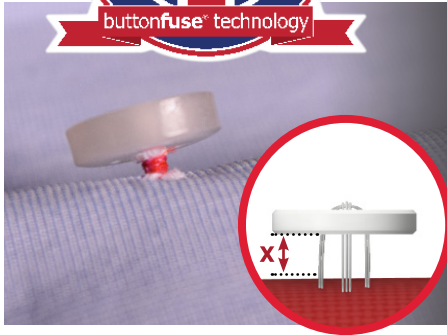

buttonfuse® technology since 1994

buttonfuse® solo

Up to
1,950
buttons
PER HOUR*

In order to **achieve a consistently high standard of button shank wrapping** it is essential that the shank length (X) is of sufficient length. Failure to achieve this will reduce the yield per cone and render the wrapping less effective in securing the button. **This is a simple setting on most button attaching machines.**

As pioneers in innovative fusing technology, our unique range of button wrapping machines offer the biggest, fastest output currently available on the market.

Our products are so easy to use, provide consistent quality & all with minimal thread waste.

With over 30 years of experience, our machines are made in the UK & built to last. Plus our global accredited support network means that our impeccable servicing is maintained at all times.

** Dependent upon wrap number & handling. This data is collected using MMS buttonfuse® TF thread & with the buttonfuse® solo machine set to it's minimum thread waste setting for the particular button type.*

GARMENT TYPE	SHANK LENGTH 'X' (before wrapping)	NUMBER OF WRAPS	APPROX. NUMBER OF BUTTONS PER CONE (using buttonfuse® solo)
Shirts	2.5mm	7	11,100
Jackets/Pants	3mm	12	6,750
Coats	4mm	26	5000

Our thread is proven & specified by the major brands of the world & is the ideal partner to the buttonfuse® range of machines. The high quality components guarantee button security from shirts to raincoats.

buttonfuse® TF thread

We have the world's largest range of threads + our high stockholding levels mean that they are readily available exactly when you need them most. Request our shade card or download from our website for full details.
